

Add an element at the 0th index:

```
name = ["Mohan", "dash", "karam", "chandra", "gandhi", "Bapu"]
name.insert(0, "freedom_fighter")
print(name)
```

Find the output and explain:

```
name = ["Mohan", "dash", "karam", "chandra", "gandhi", "Bapu"]
print(name[2:4]) # Output: ['karam', 'chandra']
```

Add two more elements at the end of the list:

```
name.extend(["NetaJi", "Bose"])
print(name)
```

Value of temp:

```
name = ["Bapuji", "dash", "karam", "chandra", "gandi", "Mohan"]
temp = name[-1]
name.pop()
print(temp) # Output: Mohan
print(name) # Output: ["Bapuji", "dash", "karam",
"chandra", "gandi"]
```
